PROFESSIONAL SUMMARY

Aspiring Computer Engineering graduate skilled in SQL, Python, Excel, Power BI, and data analytics. Experienced in data cleaning, validation, transformation, data modelling, EDA, KPI analysis, and dashboard development. Strong analytical and problem-solving abilities with hands-on experience translating data into actionable insights and supporting data-driven solutions.

EDUCATION

Bachelor of Technology (B.Tech) Computer Engineering (CGPA-7.9)	2023-26
Sandipani Technical Campus Faculty of Engineering and Polytechnic, Latur	
Diploma Information Technology percentage-73%	2020-23
Puranmal Lahoti Government Polytechnic College, Latur	
SSC Percentage-91.40%	2020
Shivaji Vidyalay, Gharani	

TECHNICAL SKILLS

Programming: Python, Pandas, NumPy
SQL & Databases: SQL, MySQL, PostgreSQL, Relational Databases
Data Analytics: Data Cleaning, Data Validation, Data Transformation, EDA, Statistical Analysis, Data Modelling, KPI Analysis
BI & Visualization: Power BI, Excel, Power Query, Dashboard Development, Data Visualization
Reporting: KPI Reporting, Ad-hoc Reporting, Data-driven Insights, Documentation
Tools & Collaboration: Git, GitHub, Jira, Trello

PROJECTS

CUSTOMER CHURN PREDICTION

Tools: Python, SQL, Pandas, NumPy, Scikit-learn

- Cleaned and preprocessed customer data, handling missing values and categorical variables.
- Performed EDA to identify customer behavior and churn patterns.
- Engineered features and prepared data for ML models.
- Trained and evaluated classification models using performance metrics.
- Analyzed model results to identify key churn factors.

EDUCATION PROGRAM MONITORING & EVALUATION ANALYSIS

Tools: Python, SQL, Excel, Power BI

- Developed KPI-based framework to monitor student participation, attendance, completion, and learning outcomes based on curriculum progress and management.
- Cleaned and analyzed participant data using Python, SQL, and Excel to identify trends and data-quality issues.
- Built an interactive Power BI dashboard to track KPIs, identify performance gaps, and generate data-driven decisions.

SALES PERFORMANCE ANALYSIS

Tools: Python, SQL, Power BI, Excel, Power Query

- Connected multiple datasets and performed data transformation using Power Query.
- Calculate the measures using aggregate function in sql, power query and python to solving queries.
- Designed charts to identify top-performing products and locations. Applied data modelling techniques to improve report performance.

CERTIFICATION

Data Analytics - Teks Academy , Hyderabad

Mar 2026 - Aug 2026

Data Visualization: empowering Business with Effective Insights- Forage
